

Extract Data from XML Using SQL

```
declare @xml xml
```

```
set @xml = '
```

```
<cjischarge>
```

```
<cjisid> 5051 </cjisid>
```

```
<chargeid> 9617 </chargeid>
```

```
<cjiscode> 750000 </cjiscode>
```

```
</cjischarge>
```

'./chargeid[1]'

'./chargeid[2]'

<chargeid> 2000 </chargeid>

```
select x.d. value ('./chargeid[1]', 'varchar(max)') as (chargeID)
from @xml.nodes ('//cjischarge') as x(d)
```

'./chargeid[1]'

tag name

which tag?

The first chargeid tag
